

Synthetic Traffic Ticket Fixture

This document is designed only to exercise Fabsy's private upload, checkout, webhook, queue, email and refund path. It is deliberately unlike an Alberta violation ticket.

DO NOT FILE, PAY, DISPUTE OR RELY ON THIS DOCUMENT

Fixture details

Fixture ID	FABSY-QA-2026-08-22-A
Jurisdiction	Alberta (synthetic test selection)
Offence	Internal QA validation - not an offence
Ticket date	2026-08-22
Response date	2026-09-21
Displayed fine	\$172.00 CAD (synthetic)
Driver	QA Test Customer - not a real person
Licence / address	Not collected; intentionally omitted

Synthetic scenario

The internal tester states that this is a controlled production validation. No driving event occurred, there is no charge to defend, and every field should be treated as non-customer QA data. The expected result is a paid order that reaches the private reviewer queue exactly once and is then fully refunded.

Handling instructions

Mark the submission as internal QA. Do not prepare or deliver a customer assessment. After the payment, webhook, confirmation email, queue and analytics checks are complete, process a full refund and retain only the minimum evidence required by the launch checklist.
